Project Title: Using Machine Learning to create a model that predicts who survives on the Titanic shipwreck.

This is the legendary Titanic ML competition - the best first challenge for you to dive into ML competitions and familiarise yourself with how Kaggle platform works. In this project use Machine learning to create a model that predicts which passengers survived the Titanic shipwreck. The coding will happen on Kaggle. HERE is the link to the code for the same. It is recommended that you go through the code once and recreate it in a simpler way. Happy Unschooling!
